070-0400 12mm Striker Bolt

Designed as a companion part for use with Tri*Mark*'s single rotor latches and cage nuts that requires a 12mm (.472") diameter striker bolt.

MATERIAL:

AISI 4140 steel heat treated

INSTALLATION:

• Torque to 35 ft-lbs (46.7 N-m) minimum depending upon surface conditions

FINISH:

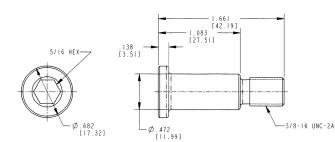

• Zinc plated with clear chromate

LATCH & STRIKER INSTALLATION:

- Install striker bolt in door frame
- Close door carefully and check for interference between head of striker bolt and latch components
- Add or remove shims under striker bolt washer as required (outside diameter of shim should be larger than outside diameter of striker bolt washer)
- Adjust striker bolt vertically so door is not guided upward or downward while being closed
- CHECK TO DETERMINE THAT BOTH SECONDARY AND PRIMARY LATCHING POSITIONS ARE USABLE
- Door should be latched but not "closed" in secondary position and latched to anticipated "closed" position with respect to adjacent surfaces in primary position
- If both primary and secondary positions are not evident, readjust striker bolt
- After installation, check door alignment and door seal pressures

CAUTION: Tri*Mark* striker bolts are designed and tested to meet or exceed FMVSS 206 safety requirements only when used with Tri*Mark*'s corresponding 206 compliant latches. Note that some of the longer striker bolts have diminished load values in certain latch families. Please check with Tri*Mark* Engineering before finalizing your striker selection requiring FMVSS 206 compliance.
